

Foot Troubles

Loose shoes are as bad as tight ones. There's no good reason for either. They should fit. The only safe way is to be fitted by a shoe man who knows what shoe will fit your type of feet.

Regal Shoes are made in quarter sizes from models like your feet. They'll fit from toe to heel, from sole to ankle.

Summertime Clothes

Comfortable Kinds for Men

JUST now it is time to think about getting into a cooler suit—something a little lighter than your spring clothes. The "Tropical Clothes" we show this season are just what you need—stylish, good fitting, well made and of exactly the right weight. The suits are made of linen, Priestley's cravenetted English mohair, duck and light wools; the trousers are made of linen, duck and wools; the separate coats of pongee, mohair, serge and linen. Every quality is shown, fairly priced.

Men's \$3.50 Hats
\$2.25

Hawes von Gal, No Name and Shoebel brands of soft felt hats, on the newest spring and early summer blocks, in styles for men of every age. Special lot, in all colors and sizes; styles worth \$3.00 and \$3.50. **\$2.25**

ELASTIC SEAM DRAWERS

Drawers made of good quality poplin with elastic seams. All sizes in the regular 50c quality. **39c**

"POROSKNIT" UNDERWEAR

Genuine "Porosknit" undershirts and drawers, very cool and comfortable. The 50c quality, in tan or white, each. **38c**

SUMMER UNDERWEAR

Broken lines of men's balltrigan, French lisle, sea island and mercerized "Dollar Silk" underwear, plain and fancy colors, regular \$1.00 and \$1.50 qualities; each. **65c**

SUMMER SOCK

Fancy lisle and cotton half hose in black and stylish colors, regular 25c and 35c qualities; a pair. **19c**

Sale of Men's Two-Piece Suits

We cannot emphasize too strongly the advantages of our special pricing of H. S. & M. and Kuppenheimer two-piece suits for men. We are pricing our very best and newest styles at a reduction of

To the Public.

We Are Agents for Parisian Sage, and Know the Guarantee is Genuine.

Kelly & Pollard.

Parisian Sage, the quick acting hair restorer, is guaranteed.

To cure dandruff.

To cure itching of the scalp.

To put life into faded hair.

To make harsh hair soft and luxuriant.

To make hair grow, or money back.

What Parisian Sage has done for others it will do for you. Read the following:

"I was told of your great remedy, Parisian Sage, that it would grow hair on bald heads, so I got a bottle and tried it, and it is fine. I am a young man and only 25, and was completely bald on the top of my head, and now I have hair one inch long, with the use of only one bottle. I shall certainly keep on using it until I have a good head of hair, which I have no doubt it will bring."

Oscar Armstrong, engineer, Belleville, Mo., Aug. 21, 1909.

Parisian Sage is the most delightful hair dressing made, and is a great favorite with ladies who desire beautiful and luxuriant hair. Price in cents a large bottle at Kelly & Pollard's, or by express, charges prepaid, from Giroux Mfg. Co., Buffalo, N. Y. The girl with the Auburn hair is on every bottle.

HAVE YOU SOMETHING TO SELL?

You can easily sell it. Call Bell 116.

Auto 1115, tell the girl what it is and The Herald will sell it. No bother, no formality.

MINES HAVE RECORD OF \$40,000,000 PRODUCTION

The Kelly, N. M., District Worked Since 1867, Is Still Profitable.

"As early as 1867," says Southwestern Mines, "the Graphic and Juanita mines, in the Kelly, N. M., district were worked in a denigratory manner and good quantities of lead and zinc were found near the surface and mined and smelted in Mexican adobe furnaces and the bullion hauled in wagons from the old Santa Fe trail to Santa Fe, Mo. After the Santa Fe railway reached Socorro, operations were conducted on a larger scale."

The properties are located a mile and a half from the railroad branching off at Socorro and on the western slope of the Magdalena mountain range, New Mexico. The ore deposits extend along the slope of the range both north and south of Kelly, a distance of only a few miles from the east to west.

The Lead Carbonate Era. In 1878-9 large bodies of lead carbonate were encountered in the famous Graphic mine and a great boom set in. In 1881 the Kelly mine was purchased and erected a smelting plant at Socorro. In 1896 a 100-ton smelter was erected on the Graphic mine and smelted the output of the mine. Nearly all the lead output of the mine and northern Chihuahua used to be sent through El Paso to the Billings smelter at Socorro in the early eighties.

The Juanita Key, Young American, Cavern, Tip Top and other properties in the Magdalena district have been good producers of silver-lead and zinc. Kelly and the other mines in the district have been producing great quantities of lead and zinc for development into paying mines.

The Zinc Era. For nearly 20 years zinc in large bodies was known to exist in these mines. In the early days it was considered a great detriment by the miners who threw it over the dump as waste. The local lead smelters could not treat the zinc and charged a high penalty when this unwelcome metal was in combination with the lead. There was no market for western zinc.

Eastern Demand Brought Demand. But in 1912 the rise in price and demand for zinc ores in Missouri, created a demand for western zinc and the Kelly mine became a great zinc camp, and produced for six years a great quantity of zinc from 200 to 400 tons. Meanwhile the great carbonate ores became practically exhausted and now the mining is of sulphide of zinc and lead.

Four years ago after having made heavy shipments of sulphide ores, the Kelly Mining company erected a large concentrating mill, with auxiliary roasting and an electric separating plant and have it running full time.

Large Companies Operating. The Graphic mines have over a million tons of sulphide ores in sight and have nearly completed the new dry concentrating mill. There are three large companies operating in this district, viz: The Tri-Bullion Smelting and Development company, the Ozark Smelting and Milling company, and the Germania Mining and Development company. Recently the New Jersey Zinc company purchased a number of properties.

Production of \$40,000,000. It is estimated by reliable parties that the mines in this district have yielded over \$40,000,000 yet it is only in its infancy.

Another remarkable fact is that in the same district important bodies of copper ore have been found under the zinc and lead horizon. Extensive explorations are now in progress.

PECULIAR CAVERN UNDER RICH MINES

Properties in Tres Hermanos Mountains Yield Precious Ores.

The Tres Hermanos mountains (three brothers), lying west of El Paso and eight miles northwest of Columbus, N. M., on the Southwestern, constitute one of the most conspicuous landmarks in southern New Mexico, being visible for 100 miles from points in Mexico and New Mexico.

At the southern base of the mountains is a gigantic natural cavern, the entrance being over 20 feet square, from which the cavern descends at a very steep pitch over 100 feet, and then runs an unknown distance westerly into the bowels of the mountain, being apparently 50 to 70 feet high and 40 feet wide. The floor is strewn with massive fragmentary rocks, many as large as freight cars, which have fallen from the high vaulted ceiling, where others hang apparently liable to fall.

It is an uncanny place to explore, as a candle fails utterly to lighten the surrounding gloom. For a few moments only during the morning it is partially lighted by the rays of the sun. The impression that it was excavated by man is soon corrected, as the dripping water from the cavern walls that must have poured forth from this subterranean channel is seen.

Peeks Rich with Ore. The central peaks of the Tres Hermanos are granite boulders which intrude through the surrounding carboniferous limestones that surround its base on all sides. The limestones carry deposits of lead, silver and zinc. The gold is chiefly placer. The lead and zinc are found principally in the north and northwest parts of the group. These have been worked and known for years and have yielded, probably, \$20,000,000, principally from the Cincinnati vein.

The lead deposits as described by Prof. Waldemar Lindgren in the bulletin of U. S. Geological Survey, consist of normal fissure veins in granite porphyry and typical contact-metamorphic deposits of lead and zinc in limestone near the contact with the porphyry. The veins are situated a mile south of the zinc mines.

The Mines. The Cincinnati vein, owned by the Golden Cross & Eagle Co., is the largest producer, and is said to have yielded \$100,000,000. Other veins of the same class are the Yellow Jacket and the Hancock. The latter, owned by C. E. Burdick of Deming. The shaft on this vein is 400 feet deep and some 1000 tons of ore rich in lead and some gold were shipped from it.

Zinc Deposits. At the northern base of the mountains are the zinc mines in the limestones. These were originally worked for the lead. In 1904 it was found that there were large deposits of zinc carbonate, and Frank Thurmond and Lindauer, of Deming, worked the mines and shipped a number of carloads, to the Kansas

EL PASO HERALD

MINING AND OIL NEWS.

zinc smelters. The mines have reverted to Col. Fitch, formerly of Socorro, and his sons.

ROBERT S. TOWNE ADDS TO HOLDINGS IN HIDALGO. Jose Martinez Ceballos, acting for the Mexican Metallurgical company, one of the holdings of Robert S. Towne, formerly of El Paso, has just denounced the Zimapan mining Agency, an area of mineral ground aggregating 400 pertenencias or nearly 1000 acres, and also includes in the denouncement any demasias or vacancies that may be found in the surveys. The grounds are situated in the Bonanza municipality in the state of Hidalgo, Mexico. The Mexican Metallurgical company is securing great extensions of mining lands in this district, having now under its control, including the last denouncement, 2000 pertenencias of mineral lands or about 5000 acres. The new mine will be known as the Cobiza.

HEAT FROM OIL IS CHEAPER THAN COAL. Two and a half barrels of oil are the cost of one ton of coal. When used in the furnaces of the same amount of heat can be obtained from 2 1/2 barrels of oil as can be obtained from one ton of coal. But the difference in price is not so great. Coal produces the same amount of heat per ton as 2 1/2 barrels of oil costs in California anywhere from \$6 to \$8 per ton wholesale. Two and a half barrels of oil, figured at the market delivery price of \$1 per barrel, costs \$2.50—a saving of from \$3.50 to \$5.50 on every ton of coal displaced by oil.

Under the circumstances it would be impossible that any fuel could be obtained which could displace oil, and such being the case, there is a guaranteed consumption from every railroad on the coast as long as the oil fields hold out.

HEAVY PRODUCTION OF OIL IN VARIOUS FIELDS

In the Russian oil fields at Baku there are large areas that have produced upward of 150,000 barrels per acre in Louisiana in the Jennings field, four wells on one single acre of ground produced 5,000,000 barrels of oil. At Beaumont, Texas, nearly as good a showing was made. In California some remarkable showings have been made also. The Santa Fe property at Olinde, in Orange county, has produced on 120 acres of land an average of 30,000 barrels per acre, and the land is still producing heavily, and not all of it is as yet developed. The Claremont oil company in the Kern river field, California, has already produced an average of 30,000 barrels per acre. The Santa Maria field several individual wells have already produced from 1,000,000 barrels to 2,500,000 barrels each, and are still producing heavily.

PHENOMENA NOTED IN A NEW MEXICO MINE

A remarkable example of the formation of a very recent gold vein is at Ojo Caliente, in Rio Arriba county, New Mexico, where a small gold-silver vein occurs which is directly connected with the tuffs deposited by the living hot springs. Somewhat the same phenomena is observed in Steamboat Springs, Nevada, where narrow fissures, once the outlets of hot springs, have become filled with quartz, forming fissure veins carrying gold and some other metals. These hot springs, as well as those of Sulphur Bank are depositing clinnabar, gold and other metals, together with gelatinous silica, in the throats of the springs. It is notable that some of the fissure veins of late Tertiary origin in New Mexico are filled with chalcodendrite, the kind of quartz that the hot springs deposit. In these veins are also barite and fluorite.

DEAL PENDING FOR ANEXAS AND CIGARRERO PROPERTIES.

There are rumors that a powerful foreign syndicate will become interested in the great Cigarrero mine Amoloya, state of Chihuahua, and, according to the Parra Mining, plans are now underfoot, are that a new company, capitalized at \$20,000,000 pesos, will purchase the Cigarrero and Anexas and consolidate with some of the surrounding properties. It is believed that this great organization will take over the Santa Rosalia smelter project, enlarging it and become a strong competitor with

NADINOLA Talcum Powder

Will Please the Most Exact Man, Woman or Child.

Nadinola Talcum Powder is composed entirely of sanative ingredients, fine and soft as velvet. When used it sets free just enough oxygen to keep the skin white and soft, and in a smooth, healthy condition. Prevents sunburn, allays irritation. It's for men and women requiring the best. 25c. by leading druggists or mail and your money back if not pleased. National Toilet Company, PARIS, TENNESSEE.

Sold by Kelly & Pollard and Other Druggists.

the Guggenheims. This new movement means tremendous activity. The Amoloya camp is located near the railroad, between Jimenez and Parra, and about 50 miles south of the famous Santa Eulalia camp, which it greatly resembles in the vastness and richness of its ore deposits.

Among the properties with great features in Amoloya are the Puentes and Ventura, the Cigarrero, the San Enrique, Exploradora, Los Angeles and El Carmen groups, the last four belonging to the Amoloya Mining company, controlled by N. O. Bagge, formerly owner of the Rio Plata mine.

CHINO COPPER COMPANY REPORTS INCREASED WORK.

The monthly report on progress of the Chino Copper company, operating at Santa Rita, Grant county, N. M., states that only six of the eight drills were employed in the spaces between the known ore bodies with the idea of proving the continuity and getting the property in shape for production, rather than with the idea of enlarging the extent of developed ore.

There was an increase, however, in the fully and partially developed ore of 395,056 tons, bringing the total ore in sight to 17,948,556 tons. The grade remains practically the same. The other two drills, which have been used with excellent results in developing water supply, will now be moved back to the mines and the large rig will be set up in the Hearst air shaft.

LORDSBURG DISTRICT REPORT SHOWS PROGRESS.

The shipments for May from the Lordsburg district amounted to 81 carloads of ore, averaging 55 tons per car, or a total tonnage of 2835 tons, and it has been estimated that it gave a return of over \$14,000 profits. The mine is in active operation and producing shipping ore.

The Lordsburg Mining & Reduction company, which has been working two shifts in the Viola mine, will increase the force of miners to three shifts. The present force is breaking more ore than can be hoisted.

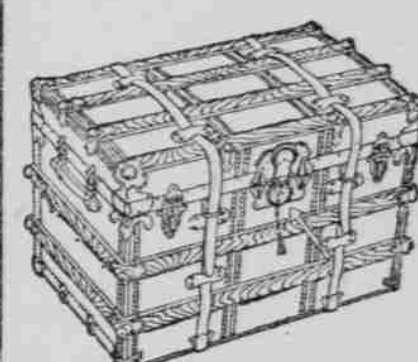

CAPITALISTS CONSIDERING DEAL FOR EL TIENE MINE.

The Mexico Daily Record says that El Tigne mine, Sonora, is under option to an eastern cotier of capitalists at \$5,000,000 gold. No specific examination is in process with reference to the mine. There are about 400 men employed in the mine. The total amount of development work is 28,755 feet. The ore reserve is 254,551 tons. In addition there are 48,000 tons of tailings that carry 2.8% per ton, which can be treated for \$4.00 per ton. The net profit realized from the property for 1909 was \$586,000.

CHIHUAHUA MINE MAY BE SOLD.

The deal for the purchase of the mining properties of the Compania Minera de Nalea in the Nalea district, state of Chihuahua, has not been closed, but it is understood that the U. S. Smelting & Refining Co. may exercise its

JARRELL, BALLARD & CO.

In getting ready for your summer trip, if a trunk or suit case is needed, you would do well to see what we have in that line. Special reduced prices in trunks.

Suit Cases

If you need a suit case we can supply your need at very reasonable prices. Matting cases at \$1.50, \$2.00, \$2.25 and \$2.50. We have leather cases made substantial for \$3.50, \$3.75, \$5.00, \$6.50 and \$8.50. Full leather lined, just the same class of cases and sold by some other dealers at \$12.50; our price is only \$9.95.

Hand Bags

This is something needed on your trip. Prices, \$1.50, \$2.00, \$2.50, \$3.00, \$3.50, and up to \$5.00.

\$12.50 trunk, made with heavy brass bumpers, full linen lined, braided through and cinched; two trays; two leather straps around \$10.95
\$10.00 trunk, in a very similar way. Built for service and durability \$8.95
\$9.00 trunk, one strongly made with two sole leather straps; \$7.95
\$7.50 trunks, made with heavy brass bumper and leather straps, for \$6.45
\$6.50 trunks, made with brass bumpers, two leather straps, and other trunks made full, zinc covered, for \$5.45

THE WEATHER.

Forecast.

For El Paso and Vicinity.—Fair tonight and Thursday.

For New Mexico.—Fair tonight and Thursday.

For West Texas.—Tonight and Thursday partly cloudy weather.

River at El Paso.—Height of surface this morning above fixed zero mark, 12.5 feet; this date last year, 12.1 feet.

Temperature.

Observations, 6 a. m.—Highest temperature last 24 hours; 91 degrees; lowest temperature last 12 hours, 67 degrees.

SCHOOL BOARD WILL MEET TUESDAY EVENING

President Harry Carpenter, of the El Paso school board, has returned to the city and there will be a meeting of the school board Thursday evening to elect teachers and decide the question of summer salaries.

CHARMING.

Mrs. Gabb—What are you looking at me like that for?
Mr. Gabb—I was only thinking, dearie, how nice you looked with your mouth shut.

S. S. S. THE REAL CURE FOR SCROFULA

Scrofula is a blood disease manifested usually by an ulceration of the glands. It is almost entirely hereditary in its origin, being the seeds or dregs of some specific blood poison which has been transmitted, in modified form, to the offspring of diseased parentage. Where the blood is specially vitiated Scrofula attacks other portions of the system besides the glands, and we see its effects frequently in weak eyes, poorly developed bodies, running sores and ulcers, skin diseases like scaldhead, catarrhal troubles etc. While the young are the usual sufferers from scrofulous troubles, it is true that it is sometimes held in check until middle life is reached, or passed, and then, as the physical system begins to decline, older persons are attacked by the disease. S. S. S. is the one real and certain cure for Scrofula. It is a blood purifier without an equal and it cures this destructive blood poison by removing the germs from the blood and so enriching and building up the circulation that the disease can not remain. S. S. S. searches out every taint and impurity from the blood; it gives to the blood the richness and power necessary to the healthy growth of children, and it strengthens and invigorates the constitutions of older persons, by its fine tonic effects. S. S. S. is a purely vegetable medicine, perfectly safe for young or old. Scrofula being a blood disease can only be cured by a blood purifier like S. S. S. Book on the blood free to all who write and request it.

When a cigar burns on the bias, throw it away—it's spoilt. You don't get the proper aroma as you smoke. Unless you have an exact proportion of wrapper and filler, the tobacco grows rank. That's why it's so important to get workmanship; that's why you must have a long filler if you want a long smoke. The

Henry George 5c Cigar

is well-made—it is well-blended, it burns evenly and it tastes right right to the end. The leaf is mild and fragrant—that's because it has been thoroughly matured. The aging removes the harshness. You can smoke twenty a day and your nerves won't know it. In every case in town and head in every case.

The Clubhouse is banded—the Perfecto is not
